## Concentration

1) A 34.5 g sample of pure NaCl was placed in a 250 mL volumetric flask. What is the percentage concentration ( $\mathrm{w} / \mathrm{v}$ ) of the salt solution?
2) A solution has a salt concentration of $1.25 \mathrm{~g} / \mathrm{L}$.

What is its salt concentration in ppm?
3) A 1.00 Kg sample of baby food contains 0.044 grams of magnesium.

What is the magnesium concentration in ppm?
4) A sample of creek water has a lead concentration of $2250 \mu \mathrm{~g} / \mathrm{kg}$. What is its concentration in ppm?
5) A sample of fish caught from the bay has a lead concentration of $0.431 \% \mathrm{w} / \mathrm{w}$. What is its concentration in ppm?
6) A student is provided with 500.0 mL of a 950 ppm solution of $\mathrm{KNO}_{3}$. What volume of this solution in millilitres contains 0.45 g of $\mathrm{KNO}_{3}$ ?
7) What mass in milligrams of potassium nitrate is present in 0.35 kg of a 450 ppm $\mathrm{KNO}_{3(\mathrm{aq})}$ ?
8) What is the concentration in $\mathrm{mol} \mathrm{L}^{-}$of NaCl in an $3.21 \% \mathrm{w} / \mathrm{v} \mathrm{NaCl}$ solution?
9) What is the mol of ethanol in a 750.0 mL bottle of wine with a concentration of $13.1 \% \mathrm{v} / \mathrm{v}$ ethanol if the density of ethanol ( $46.1 \mathrm{~g} \mathrm{~mol}^{-}$) is given at $0.789 \mathrm{~g} / \mathrm{mL}$
10) Dichromate reacts with ethanol according to the equation below.
$3 \mathrm{CH}_{3} \mathrm{CH}_{2} \mathrm{OH}+\mathrm{Cr}_{2} \mathrm{O}^{2-}+8 \mathrm{H}^{+} \rightarrow 3 \mathrm{CH} 3 \mathrm{COOH}+2 \mathrm{Cr}^{3+}+7 \mathrm{H}_{2} \mathrm{O}$
A 20.0 mL sample of wine was titrated against a $0.100 \mathrm{M} \mathrm{K}_{2} \mathrm{Cr}_{2} \mathrm{O}_{7}$ and an average titre of 12.44 mL was obtained. Find the percentage concentration in $v / v$ if the density of ethanol is $0.789 \mathrm{~g} / \mathrm{mL}$.
