1. Consider the unbalanced equations of several redox reactions shown below. A redox reaction is composed of two different types reactions taking place simultaneously., the oxidation and the reduction reactions. For each redox reaction below identify the :

- atom oxidized,
- atom reduced,
- oxidizing agent (0xidant),
- reducing agent (Reductant),
- oxidation half reaction,
- reduction half reaction,

The first is done for you.

- atom oxidized $=\mathrm{Mg}$ from O to +2
- atom reduced $=\mathrm{H}$ from +1 to 0
- oxidizing agent $=\mathrm{HCl}$ metal
- reducing agent $=\mathrm{Mg}$ metal
- oxidation half reaction $=\mathrm{Mg} \rightarrow \mathrm{Mg}^{2+} 2 e$
- reduction half reaction $=2 \mathrm{H}^{+}+2 e \rightarrow \mathrm{H}_{2}$
- overall balanced equation $=\mathrm{Mg}+2 \mathrm{H}^{+} \rightarrow \mathrm{Mg}^{2+}+\mathrm{H}_{2}$
b. $\mathrm{Fe}+\mathrm{V}_{2} \mathrm{O}_{3} \rightarrow \mathrm{Fe}_{2} \mathrm{O}_{3}+\mathrm{VO}$
c. $\mathrm{KMnO}_{4}+\mathrm{KNO}_{2}+\mathrm{H}_{2} \mathrm{SO}_{4} \rightarrow \mathrm{MnSO}_{4}+\mathrm{H}_{2} \mathrm{O}+\mathrm{KNO}_{3}+\mathrm{K}_{2} \mathrm{SO}_{4}$
d. $\mathrm{K}_{2} \mathrm{Cr}_{2} \mathrm{O}_{7}+\mathrm{SnCl}_{2}+\mathrm{HCl} \rightarrow \mathrm{CrCl}_{3}+\mathrm{SnCl}_{4}+\mathrm{KCl}+\mathrm{H}_{2} \mathrm{O}$
e. $\mathrm{K}_{2} \mathrm{Cr}_{2} \mathrm{O}_{7}+\mathrm{H}_{2} \mathrm{O}+\mathrm{S} \rightarrow \mathrm{SO}_{2}+\mathrm{Cr}_{2} \mathrm{O}_{3} \mathrm{LO}_{3}$
f. $\mathrm{KClO}_{3}+\mathrm{C}_{12} \mathrm{H}_{22} \mathrm{O}_{11} \rightarrow \mathrm{KCl}+\mathrm{H}_{2} \mathrm{O}+\mathrm{CO}_{2}$
g. $\mathrm{H}_{2} \mathrm{C}_{2} \mathrm{O}_{4}+\mathrm{K}_{2} \mathrm{MnO}_{4} \rightarrow \mathrm{CO}_{2}+\mathrm{K}_{2} \mathrm{O}+\mathrm{Mn}_{2} \mathrm{O}_{3}+\mathrm{H}_{2} \mathrm{O}$
